Portfolio: jccalingasan.github.io

PROFESSIONAL SUMMARY

Automation and AI specialist who builds workflows and AI-driven systems that take repetitive, manual work off a team's plate. Strong with n8n, GoHighLevel and other CRM platforms, API and webhook integrations, and using AI tools like Claude and ChatGPT as part of how I build. Also experienced in short-term rental operations, Python development, and internal tooling. Self-taught, detail-oriented, and reliable working independently.

PROFESSIONAL EXPERIENCE

Freelancer – IT & Automation Specialist

February 2026 – Present

- Design, build, and maintain workflow automations in n8n (primary platform), including multi-step flows with branching logic, triggers, and error handling that run reliably unattended.
- Build and configure GoHighLevel automations, including lead scoring, routing, multi-channel follow-up, pipelines, tags, and custom fields (hands-on via GHL and ContactPoint, a white-label build of GoHighLevel).
- Integrate tools and services through REST APIs, webhooks, JSON, and OAuth, using Python for fetch, transform, and post steps that no-code nodes don't cover.
- Configure CRM and work management platforms such as Monday.com, setting up pipelines, statuses, automation rules, and data structures.
- Manage short-term rental operations across Airbnb, Booking.com, Hostaway, and SuiteOp, including listing setup and onboarding new properties.
- Set up and maintain Hostbuddy AI guest-messaging, building and updating knowledge bases so automated responses stay accurate and on-brand.
- Build email automations and lead-management flows, capturing, validating, routing, and logging data with checks to prevent duplicates and incomplete records.
- Maintain data and reporting in Google Sheets and Google Workspace.

Freelancer – AI Researcher & Developer

July 2024 – February 2026

- Conducted AI research across multiple client projects, including data analysis, model evaluation and testing, and documentation using Python and basic C++.
- Developed and tested AI-based solutions, including AI chatbot prototypes improved through structured prompting and test iterations.
- Built AI agent workflows to automate multi-step tasks and translated findings into clear next steps for clients.
- Prepared technical summaries and reports explaining findings, test results, issues, and recommended actions.
- Supported UAV system setup and video/audio detection experiments using embedded devices, including hardware integration and functional testing.
- Built and integrated a custom multirotor drone, performed bench and flight-readiness tests, and troubleshooted issues to improve stability.

On-the-Job Trainee – Mechanical Technician

Isuzu Pagbilao (MBT Autoworx Corporation) · July – August 2023

- Performed preventive maintenance and routine servicing (inspection checklists, fluid checks/top-ups, basic replacements) under shop procedures and safety practices.
- Supported senior technicians with diagnostics by preparing tools, helping with teardown and inspection, and recording findings.
- Helped manage tools and parts flow by organizing inventory, preparing job kits, and coordinating updates with the service team.
- Performed post-service checks to confirm service quality under supervision.

Student Assistant – Library (EMRC)

Manuel S. Enverga University Foundation · 2023 – 2024

- Managed front-desk support for students and staff, handling requests and basic inquiries.
- Maintained records and documents through organized filing, data entry, and basic data handling.
- Supported school activities including photo/video coverage and organizing media files for documentation.
- Operated event equipment, performed pre-event checks and on-site troubleshooting, and coordinated with staff to keep events running smoothly.

PROJECT HIGHLIGHTS

StockMate – Inventory Management Web App (Python, FastAPI)

- Built and deployed a full-stack inventory management application using FastAPI, SQLAlchemy, HTMX, and Tailwind.
- Implemented CRUD operations, a dashboard, filtering, and activity logging backed by a relational database.
- Available on GitHub: github.com/jccalingasan/stockmate

Inquire – Multi-Agent AI Research Assistant (Python, FastAPI)

- Built a multi-agent system where a Planner agent splits a task, multiple Researcher agents run in parallel, and a Writer agent composes a structured final output.
- Implemented the multi-agent orchestration by hand, including parallel execution and LLM API calls, with live status streaming.

ReelForge – Local Video Automation Tool (Python, FFmpeg)

- Built a local tool that batch-converts source clips into 1080×1920 reels driven by FFmpeg, reading titles from a CSV.
- Preserves original audio, sorts output by date and account, and logs successful and failed renders.
- Wrapped in a Flask interface for visibility, with the process able to run on a schedule.

AI Chatbot & Agent Workflow Development (Python)

- Developed chatbot prototypes using structured prompting and testing strategies.
- Built agent-based workflows to automate reporting, data processing, and task execution.
- Evaluated model responses and improved performance through iterative testing.

Learning Platform – Automated Submission Validation (Python, pytest)

- Worked on a learning platform where Python exercises were validated automatically using pytest.
- Arranged and maintained the exercise scripts, and corrected outdated or error-prone exercises so validation ran reliably.

WordPress Site Development

- Built and customized WordPress sites end to end, including structure, configuration, and integrations.
- Developed and maintained a personal web portfolio.

Undergraduate Thesis – Automated Water Sprinkler with Railing System

- Designed and fabricated a rail-guided, Arduino-controlled irrigation system for vegetable crops.
- Applied fluid mechanics and machine design principles to improve water distribution.

- Conducted field data gathering and performance comparison before and after implementation.

Drone Platform Assembly & Detection System Support

- Assembled a multirotor drone platform for testing and experimentation.
- Supported hardware integration and functional testing.
- Assisted in system setup for video and audio-based drone detection using embedded devices.

TECHNICAL SKILLS

Automation & Workflow: n8n (primary); GoHighLevel; ContactPoint (GoHighLevel white-label); Monday.com; Make; CRM automation rules, pipelines, tags, and custom fields; lead scoring and routing; email automation

AI & Software: Python; FastAPI; basic C++, Java; AI agents and multi-agent workflow design; chatbot prototyping; prompt engineering; Claude and ChatGPT as working tools; AI model testing/evaluation

Integrations & Data: REST APIs, webhooks, JSON, OAuth; SQL via SQLAlchemy; technical documentation; data collection and analysis

Rental & Property Ops: Airbnb; Booking.com; Hostaway; Hostbuddy (AI guest-messaging); SuiteOp; Amazon Business; property onboarding and listing setup

Dev Tools & Web: PyCharm; Git/GitHub; pytest; HTML, CSS, JavaScript-style scripting; WordPress

Productivity & Media: Google Workspace (Gmail, Drive, Sheets); Vimeo; Sony Vegas (video editing); FFmpeg

Mechanical Engineering: HVAC fundamentals; machine design and component analysis; power plant and industrial systems overview; preventive maintenance and diagnostics

Health & Safety: Basic Occupational Health and Safety (BOSH); safety awareness in maintenance and operational environments

EDUCATION

Bachelor of Science in Mechanical Engineering

Manuel S. Enverga University Foundation · 2018 – 2024

CERTIFICATIONS

- Oracle Cloud Infrastructure 2025 Certified AI Foundations Associate
- Safety Officer 2 – BOSH Training
